GoldenSource Corporation is a leading global provider of Enterprise Data Management (EDM) solutions dedicated exclusively to the financial services industry. Headquartered in New York, the company also has offices in the UK and India with more than 300 staff worldwide – offering an international work environment, positive/open corporate culture and various employee benefits.

Our work environment is fast paced and cutting edge. We're looking for candidates who can make quick decisions, excel in a diverse global team environment and have a strong desire to use the latest technologies while architecting and implementing solutions for clients using the GoldenSource Product suite.

Senior EDM Implementation Consultant

Summary

GoldenSource is looking to expand its North American Professional Services Group ("PSG") with a Senior Technical Consultant having Asset management and / or Banking industry specific experience within Financial Services IT, implementing software vendor Products with significant client facing exposure. Experience within reference data projects on one or more of the following data domains would be highly desirable: Client, Instrument, Product, Pricing or Corporate Actions.

The successful candidate will lead client engagements on business requirements and data analysis, user interface design and prototyping, performing product fit-gap analysis, presenting software solutions and train end-users, plan and participate in software testing, and produce quality deliverables including technical solution documentation.

We expect hands on implementation experience of industry EDM, ETL and/or Data Governance platforms, and to be current with latest technologies in the J2EE stack.

The candidate should be familiar with working in Agile project environments, experienced with the onshore-offshore delivery model, and be able to lead and train others.

Job Responsibilities:

- Provide client billable services as a professional services team member or engagement leader

- Deliver services and projects within quality, cost and time constraints

- Manage client relationships effectively, improve client satisfaction generating positive client feedback, referrals and references

- Help GoldenSource grow by actively generating new revenue opportunities originating from value-creation application of product capabilities, tools and processes

- Contribute in the development and growth of our products and services by interacting with the product managers on innovative solutions or new market opportunities as identified in the delivery of professional services

Required Skills and Experience:

- Minimum 8 years of experience executing and managing software implementations preferably with a software vendor or IT consulting firm

- Independently and successfully managed at least three large scale complex client engagements, covering all life cycle phases and with duration of at least six months

- Worked within Agile projects as a product owner and/or scrum master, led team efforts in relentless improvement within client implementations

- In-depth understanding of the inherent complexities of structured data, the processes and techniques of analyzing data flows, designing EDM systems and data quality frameworks that fuel enterprise mission-critical systems with correct, complete and timely datasets

- Strong understanding of J2EE concepts and experience of either JBoss, Websphere or Weblogic

- Strong hands-on SQL expertise, Oracle preferred

- System architecting and enterprise integration experience, including SOAP/REST APIs, queuing technologies such as Kafka, MQ, Solace

- Excellent customer-facing skills and experience

- Experience in transferring knowledge to others (coaching and mentoring)

- Team player with ability to influence and negotiate, with interpersonal skills to deal with management and staff at various levels.

- Excellent communication skills (verbal and written) – with strong emphasis on solution presentation skills, and creating high quality technical documentation

- Detailed, organized and results oriented

Other skills (preferred):

- Computer Science degree or similar data oriented engineering degree

- PMP or other project management certification

- Lean, Design Thinking

- Good understanding of DevOps, cloud architectures and big data

- Python scripting
